Page numbers are resolved from the rendered document itself and verified stable across two consecutive passes.

01 · Executive Summary

This is a computationally derived Vedic chart for a single life, covering 1981 to 2053, together with the evidence for its own reliability — including a historical back-test that failed.

NO-GO

Event-level predictive validity: NOT ESTABLISHED. Historical back-testing produced a NO-GO result. Astrological interpretations in this document are traditional/interpretive and should not be treated as empirically validated predictions.

What was tested

The engine's per-year readings were compared against 20 documented life events across 13 years. Each event was scored by the same house-activation rule used everywhere else in this report.

What the test found

That same rule returns MATCH or PARTIAL in 80.5% of 1022 arbitrary category-years, so a verdict on any single year carries no information. A floor-independent test then returned a median p of 0.5 with 0 of 20 event years in its top decile.

What this document can be relied on for

Layer	Status	Basis
Natal chart — placements, vargas, dasha periods	VALIDATED	Julian-day gate exact to 1e-9; 9 of 10 D1 bodies within 2 arcminutes of an external reference; the Jupiter difference arbitrated by a third engine.
Transits, panchanga, birth instant	CALCULATION	Computed from the birth record; independently re-derived in the technical audit. Exact sign ingresses bisected and verified.
Per-year risk levels and mechanism prose	NOT VALIDATED	Back-tested against documented events and found indistinguishable from chance. See section 14.
House and dasha interpretations	TRADITIONAL INTERPRETATION	Classical doctrine applied to this chart. Not a prediction and not evidence-based.
Genealogy, Kula Devata, historical sources	UNCERTAIN	Documentation incomplete; conflicts preserved rather than resolved.

How to read the year-by-year sections

Each year gives a dasha, the transits in force, the houses the engine activated, and a traditional interpretation. The computation is sound; the interpretation is doctrine, not prediction. No year in this document claims to have predicted an event, and the validation section shows several cases where the engine pointed away from an event that occurred.

Nothing here is a diagnosis, a death prediction, or a financial assurance. Where the traditional material is uncertain, it says so.

Open items a reader should know about

- One documentary conflict is unresolved: a death registration recorded in 2019 against a family recollection of 2018. It is reported as unresolved in the family section. It has not been settled astrologically and will not be.
- Employment dates could not be independently verified from public sources, so three historical career interruptions remain untestable rather than tested-and-failed.
- Five years are birth-time sensitive and are labelled as such wherever they appear.

02 · Methodology & Evidence Status

Three separate layers produce this document, and they are kept apart on purpose. Confusing them is how a computed value comes to be read as a prediction.

1 · Calculation

Placements, divisional charts, dasha periods and transit instants are computed from the birth record using the Swiss Ephemeris with the Lahiri ayanamsa and the mean node. This layer is reproducible: the same inputs give the same outputs.

2 · Interpretation

Readings apply classical Jyotish doctrine — whole-sign houses, the significations of planets and houses — to the computed chart. This is tradition, not measurement. It is labelled TRADITIONAL INTERPRETATION wherever it appears.

3 · Validation

The engine's yearly readings were tested against documented life events. They failed to distinguish event years from arbitrary years. That result is reported in full in section 14 and is not softened anywhere in this document.

4 · Practical guidance

Suggestions about routine, documentation and financial discipline are general considerations. They are not financial, medical or legal advice, and no professional consultation is displaced by this report.

Evidence labels used in this document

Label	Meaning
FACT	directly observed or documented
CALCULATION	computed from the birth record; reproducible
TRADITIONAL INTERPRETATION	classical Jyotish doctrine applied to this chart; not empirically validated
VALIDATED	independently reproduced by a separate computation
NOT VALIDATED	tested and found unsupported — see the NO-GO validation section
INFERENCE	reasoned from the above; not itself verified
PRACTICAL GUIDANCE	general consideration, not advice or guarantee
UNCERTAIN	contested, unverified, or dependent on an assumption
DOCUMENTARY EVIDENCE	from an official record or primary document
USER-SUPPLIED	stated by the subject; not independently corroborated

Reproducibility

Ephemeris	2.10.03
Ayanamsa	
Node convention	Mean node node — Ketu computed as mean node + 180°, never the true/KP node
House system	Parashari whole-sign
Julian day (UT)	2444947.3125

Coverage	1981 — 2053 · 5 years rendered in this build

03 · Birth Data

The single input every number in this document derives from. It is stated in full because a chart is only as good as this record.

Given

Name	Swarna Sekhar Dhar
Date	09 December 1981
Time	01:00:00 IST
Place	Berhampore, Murshidabad West Bengal, India
Time zone	Asia/Kolkata, UTC+05:30 No daylight-saving adjustment applied; India observed none in 1981.

Derived

Coordinates	24.1044927, 88.2510635
Julian day (UT)	2444947.3125
UTC instant	1981-12-08 19:30:00 UTC
Ayanamsa	· 23.604776°
Node	Mean node node

Source of the coordinates

OpenStreetMap / Nominatim, query 'Berhampore, Murshidabad, West Bengal, India'. A previous report used 24.104727 N, 88.251551 E with no stated source; that point lies about 0.28 km away, which is roughly 0.001° of arc — immaterial for chart computation, about four seconds of local mean time. The sourced point is used here.

Birth-time sensitivity

Readings were re-derived across a sweep of the birth minute. Where a year changes materially across that sweep it is labelled TIME-SENSITIVE wherever it appears — five years in this range. This concerns calculation *stability*, not accuracy: a stable reading is still not a validated one.

Years	Status	Meaning
1987, 1997, 2002, 2038, 2050	TIME-SENSITIVE	Birth-time dependent. Readings carry a visible warning wherever they appear.
2000, 2039, 2044	MODERATE	Partly birth-time dependent.
1994, 2014, 2016, 2042	ROBUST	Stable across the tested sweep.

A time-sensitive year is not a difficult year and a robust year is not a good one. These labels describe only how much the arithmetic moves when the birth minute is uncertain.

04 · Chart at a Glance

Eight facts about this chart and what each one carries. Interpretation first; the exact degrees are in section 07.

LAGNA

Calculated

D30 · Trimsamsa
Calculated

D60 · Shashtiamsa
Calculated

D27 (Bhreshta) is not implemented. Fifteen of sixteen vargas are computed; the sixteenth is disclosed as a gap rather than filled with an invented value.

Each divisional chart is birth-time sensitive in a different degree. D9 and D7 in particular can change with a small shift in the birth minute, so no relationship or children conclusion in this document rests on a divisional lagna alone.

07 · Planetary Positions

Sidereal longitudes on the Lahiri ayanamsa, mean node. Highlighted rows are the lagna lord, the 10th lord, the 7th lord, the Atmakaraka and the Darakaraka.

D1 · RASHI · SIDEREAL, LAHIRI

Planet	Sign	Degree	House	Nakshatra	Pada	State	Functional role
Sun	Scorpio	23°01′49″	3	Jyeshtha	2	Enemy's sign	functional malefic
Moon	Aries	16°52′20″	8	Bharani	2	Enemy's sign	mixed / neutral functional status
Mars	**Virgo**	**2°55′48″**	**1**	**Uttara Phalguni**	**2**	**Enemy's sign**	**Darakaraka**
Mercury	**Scorpio**	**22°01′36″**	**3**	**Jyeshtha**	**2**	**Enemy's sign**	**functional benefic**
Jupiter	**Libra**	**8°37′31″**	**2**	**Swati**	**1**	**Enemy's sign**	**functional benefic**
Venus	Capricorn	6°21′21″	5	Uttara Ashadha	3	Enemy's sign	functional benefic
Saturn	Virgo	26°14′28″	1	Chitra	1	Enemy's sign	functional benefic
Rahu	**Cancer**	**0°48′27″**	**11**	**Punarvasu**	**4**	**n/a — lunar node has no classical dignity · retrograde**	**Atmakaraka**
Ketu	Capricorn	0°48′27″	5	Uttara Ashadha	2	n/a — lunar node has no classical dignity · retrograde	shadowy node - traditionally treated as a malefic agent
Ascendant	Virgo	13°53′23″	1	Hasta	2	—	—

A dash in the state column means no dignity rule was triggered. Nodes carry no dignity in the classical scheme and are shown without one.

Jaimini significators

Atmakaraka	Rahu
Darakaraka	Mars
Karakamsha sign	Cancer
Upapada lagna	{'house': 12, 'bhava_sign': 'Leo', 'lord': 'Sun', 'lord_sign': 'Scorpio', 'sign': 'Scorpio'}

Jaimini is reported separately from Parashari and is not merged into any combined score. 8-karaka scheme with Rahu measured in reverse (30 - deg in sign).

CALCULATION DETAIL

Tropical longitude minus the ayanamsa, once. Ayanamsa at this instant 23.604776°.

08 · Panchanga

The five limbs of the Vedic calendar at the moment of birth. These are astronomical quantities, not interpretation.

Vara · weekday

Civil weekday: **Wednesday**

Ephemeris division: Thursday

> **NOTE**
> Civil and ephemeris weekday divisions differ by one offset convention; the civil weekday is used throughout.

Tithi

Shukla Dwadashi · index 12

Nakshatra: Bharani pada 2 (lord Venus)

Yoga: NYoga 19 · **Karana:** Balava

Sun and Moon

Sun sign	Scorpio
Moon sign	Aries
Sunrise	06:07 IST Swiss Ephemeris rise_trans, CALC_SET bit (empirically verified to return sunrise in this build). Lower precision than the ephemeris planets: the .se1 files are absent, so a fallback algorithm is used. Accurate to a few minutes, not to the arc-second.
Sunset	not computed — swisseph rise/set constants are swapped in this build and no validated alternative was available

Sunset is not computed. The rise/set calculation in the available ephemeris binding is unreliable here, so the value is disclosed as a gap rather than estimated. Sunrise is approximate for the same reason. Neither figure is used in any reading in this document.

Civil and ephemeris weekday divisions differ by one offset convention; the civil weekday is used throughout.

09 · House Analysis

Twelve houses read in whole-sign from the ascendant. Each carries a meaning, a strength and a specific way to go wrong. The sign and occupants shown are CALCULATION; the reading is TRADITIONAL INTERPRETATION.

.
· lord

No planet occupies this house

CORE MEANING

STRENGTH

WATCH

.
· lord

No planet occupies this house

CORE MEANING

STRENGTH

WATCH

METHOD

Whole-sign houses from the ascendant; the house lord is the occupant of the sign n places from the ascendant. No bhava-sect or Sripati correction is applied, and none is implied.

10 · Yogas & Doshas

3 formations detected. Each shows its formation rule, the arithmetic as computed, and its standing — confirmed, partial, or dependent on a school of interpretation.

Gaja Kesari Yoga CONFIRMED

Jupiter in a kendra (1/4/7/10) from the Moon

FORMATION RULE
Jupiter in a kendra (1/4/7/10) from the Moon

TRADITIONAL READING
No interpretive text was stored for this formation; the calculation is given above and no reading has been invented for it.

AS COMPUTED
Jupiter in Libra, 7th from the Moon (Moon in Aries)

LIMITATION
A formation's presence is a classical claim about placement, not a validated prediction about a life.

STANDING
High - formation arithmetically verified

Dhana Yoga CONFIRMED

A planet ruling the 2nd or 11th, itself placed in a kendra or trikona

FORMATION RULE
A planet ruling the 2nd or 11th, itself placed in a kendra or trikona

TRADITIONAL READING
No interpretive text was stored for this formation; the calculation is given above and no reading has been invented for it.

AS COMPUTED
Venus rules [2] and sits in the 5th

LIMITATION
A formation's presence is a classical claim about placement, not a validated prediction about a life.

STANDING
High - formation arithmetically verified

Dharma / Raj Yoga (Kendra-Trikona lord) CONFIRMED

A lord of the 5th or 9th placed in a kendra or trikona

FORMATION RULE
A lord of the 5th or 9th placed in a kendra or trikona

TRADITIONAL READING
No interpretive text was stored for this formation; the calculation is given above and no reading has been invented for it.

AS COMPUTED
Saturn (lord of the 5th) sits in the 1th; Venus (lord of the 9th) sits in the 5th

LIMITATION
A formation's presence is a classical claim about placement, not a validated prediction about a life.

STANDING
High - formation arithmetically verified

Doshas

Dosha analysis is not implemented. Rather than infer absence from a calculation that was never performed, the gap is stated here. A reader should not read this section as a clean result.

METHOD

Each yoga is reported with the rule that produces it and the arithmetic as computed. Absences are not reported as findings, since the engine tests only the formations it implements.

11 · Ashtakavarga & Strength

Supporting influence per house. Higher bindu means stronger support; the number is always shown, so the shading is never the only information.

Ashtakavarga — Moon

	1	2	3	4	5	6	7	8	9	10	11	12
BINDU	4	5	5	5	3	5	4	5	0	6	5	2
	1	2	3	4	5	6	7	8	9	10	11	12

Strongest sign Capricorn, weakest Sagittarius, total 49 against a classical total of 49.

Ashtakavarga — all charts

Chart	Total	Classical	Agreement	Strongest sign
Sun	48	48	matches	Gemini
Moon	49	49	matches	Capricorn
Mars	39	39	matches	Virgo
Saturn	39	39	matches	Aquarius

PARTIALLY CALCULATED

4 of 7 planetary tables are verified against their published totals (Mars=39, Moon=49, Saturn=39, Sun=48). Remaining tables (Mercury, Jupiter, Venus) are not confirmed and were not fitted to their checksums, so the Sarvashtakavarga total is NOT reported: a partial sum is not the classical 337 and would be misleading.

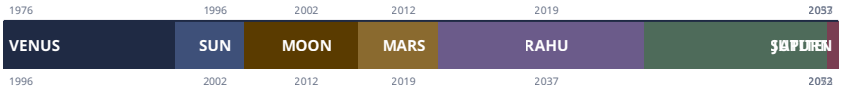

Shadbala — sixfold strength

Planet	Total (rupas)	Minimum	Result	Surplus
Sun	5.771	6.5	below	-0.73
Moon	**8.885**	**6.0**	meets	**+2.88**
Mars	**7.431**	**5.0**	meets	**+2.43**
Mercury	5.748	7.0	below	-1.25
Jupiter	**8.016**	**6.5**	meets	**+1.52**
Venus	**7.763**	**5.5**	meets	**+2.26**
Saturn	**5.914**	**5.0**	meets	**+0.91**

Virupas and Rupas are mixed scales by construction. Uchcha, Dig, Kendradi, Cheshta and Naisargika are Virupas; Saptavargaja is already in Rupas and is not divided again.

12 · Vimshottari Dasha

The 120-year cycle divided by the Moon's nakshatra at birth. Every year in this report inherits its dasha context from this sequence, which makes it the spine of the whole document.

Vimshottari Mahadasha · 1981–2053

DASHA · Mahadasha span · Block width is a linear share of 1981–2053.

At birth

Nakshatra lord	Venus
Balance	5.31 years of the Venus mahadasha already elapsed at birth; 14.69 years remain
First mahadasha	Venus from 1976-08-18

Mahadasha periods

Venus Mahadasha

1976-08-18 — 1996-08-18

20 years

relationship, comfort, resource and creative output

Sun Mahadasha

1996-08-18 — 2002-08-18

6 years

authority, father, vitality and public standing

Moon Mahadasha

2002-08-18 — 2012-08-18

10 years

mind, mother, emotion and public responsiveness

Mars Mahadasha

2012-08-18 — 2019-08-18

7 years

effort, siblings, assertion and conflict

Rahu Mahadasha

2019-08-18 — 2037-08-18

18 years

ambition, unconventional paths, networks and volatility

Jupiter Mahadasha

2037-08-18 — 2053-08-18

16 years

learning, teaching, children, dharma and expansion

Reading a dasha

A mahadasha sets the background conditions for twenty years or so; the antardasha inside it decides which background is foreground; the pratyantardasha does the same at a finer grain. Nothing in that sequence identifies a specific event — the validation in section 14 tested exactly that and found no ability to do so.

CALCULATION DETAIL

Balance is a fraction of the lord's own period, never of the 120-year cycle. Antardasha and pratyantardasha are reckoned from each mahadasha's own lord sequence. 5.31 years of the Venus mahadasha already elapsed at birth; 14.69 years remain

13 · Life Themes

Six themes that run across the whole chart. Stated once here so the year-by-year pages can stay short.

Everything on this page is TRADITIONAL INTERPRETATION. The placements it rests on are shown in section 07 and the house detail in section 09.

Learning and credentials

Mercury rules both the ascendant and the 6th while the 9th carries the long road. Study that ends in a usable skill travels further than study that ends in a credential.

Work and vocation

The 10th in Aquarius with Saturn ruling it: results come through sustained technical work and networks rather than position alone.

Money

Venus rules the 2nd and sits in the 5th. Resource follows craft and creative output; speculative gain is the 11th's exposure.

Partnership

The 7th lord in the 6th ties marriage to shared work. Partnership built alongside work holds better than partnership built apart from it.

Children and learning

Jupiter's placement links the 5th and the 9th, so teaching and children arrive together in this chart.

Home and land

A 4th emphasis makes property and inner steadiness measurable themes rather than abstractions.

How these themes are used

A theme is a standing characteristic of the chart. It is not a prediction, and it carries no score. The year pages show which houses the engine activated in a given year; this page explains what those houses mean when they are active.

14 · Historical Life-Event Validation

NO-GO

Event-level predictive validity: NOT ESTABLISHED. Historical back-testing produced a NO-GO result. Astrological interpretations in this document are traditional/interpretive and should not be treated as empirically validated predictions.

The engine's per-year readings were back-tested against documented life events. The design was falsifiable and it falsified the model's event-detection claim. What follows is the measurement, not a defence of it.

Sample size

Events recorded	21 events
Testable	21 — the remainder lack the date precision an annual-resolution engine needs
Event years	14
Verdict distribution	3 MATCH, 2 NO MATCH, 12 PARTIAL, 1 UNTESTABLE, 3 WEAK

Why the null control is the whole argument

> **METHOD**
>
> same house-activation test applied to arbitrary category-years
>
> **1022** category-years tested.
>
> 57.9% of all 876 house-years score at or above the activation floor of 2, and the median house scores exactly 2, so MATCH/PARTIAL is the default outcome rather than a signal.

MATCH or PARTIAL — the two verdicts that look like confirmation — occur in **80.5%** of arbitrary years. A rule that approves four years in five has not distinguished anything, so its per-year verdicts cannot be evidence for or against any event.

The floor-independent test

Removing that artifact requires a different statistic: rank the twelve houses by activation *within* each year and ask whether the event's houses rank unusually high. That is invariant to the global level shift.

Measure	Value	Reading
Median p	**0.5**	exactly chance
Top decile	**0 of 20**	no event year is unusual
Bottom decile	**3**	three years point mildly *away* from what happened
Best single result	**p = 0.167**	across all events
Expected by chance	**2.0**	at α = 0.10 over 20 tests
Observed	**0**	fewer than chance

Median p is exactly chance. Three of twenty event years fall in the BOTTOM decile — the model points mildly away from events it should have caught.

Claims the back-test contradicts

These matter more than the no-match tally. A reader is far likelier to assume these particular readings are supported, so each is stated with the measurement that breaks it.

A reader might assume	What the data shows	Status
2024 indicates family separation	2nd house activation 0, 12th activation 1 in that year	NOT VALIDATED
2026 indicates a career interruption	10th house activation 0 in that year	NOT VALIDATED
the 9th house tracks qualification	the year the qualification obstruction ENDED carries the highest 9th score; the first-class year (2005) is among the weakest	NOT VALIDATED
the 9th house tracks the father	9th activation is 1 in the 2006 surgery year and in both candidate death years alike — it does not separate them	NOT VALIDATED

Defects found during validation

Two classes, kept separate on purpose. An **engine** defect invalidates a number. A **harness** defect invalidates a conclusion drawn from a number that may itself be fine. Conflating them would let a real engine bug be dismissed as a test artefact.

Engine defects

Natal-conjunction detector filed oppositions as conjunctions

The root test used the separation WRAPPED into [-180, +180), which has roots at both 0 and +/-180. Of 21 reported 'conjunctions', 14 were exact 180-degree oppositions and only 7 were true conjunctions.

Impact	overstated the mechanism count the validation weighs
Blast radius	year_engine.py has no conjunction detector, so the v5 baseline was never affected
Fixed	yes

Sign-entry and crossing loops stopped at the first hit

A retrograde graha crosses a sign or longitude three times in a year (direct, retrograde, direct). The loops broke after the first, hiding 7 of 32 sign entries and 11 of 32 crossings.

Impact	understated dated transit coverage
Blast radius	validation extractor only
Fixed	yes

Harness defects — bugs in the test, not the chart

Defect	Why it mattered	Fix
activation keyed by int, read back as str	A str-only lookup reported zero activated houses for every year — indistinguishable from a real negative result. Bit three times across two sessions.	int-or-str tolerant lookup with a resolution assertion
a display line re-encoded the activation rule	printed a house score as 0 when the stored value was 1	display reads the raw score, never a rule-derived one
TOC substitution matched only its own placeholder	pass 2 substituted nothing, so a section whose page moved kept a stale number; and an HTML-escaped '&' in the data attribute left four sections permanently unresolved	idempotent substitution plus unescaping on lookup

Defect	Why it mattered	Fix
emoji QA gate flagged required glyphs	U+2713 (check mark) and U+2022 fall inside the Dingbats range and were flagged, though the brief REQUIRES them	required-glyph set exempted from the emoji scan

Protocol caveat

The original frozen prediction file was written before the event data existed. A later regeneration happened AFTER the event file had been read, so it does not independently carry that guarantee. Its integrity rests on a diff showing the change is confined to two documented geometry/loop defects, with no value altered for a reason that could know an outcome. Both files are retained.

What could not be tested at all

Item	Why
Three historical job losses	no year — the value is the literal string 'historical (exact dates UNVERIFIED)'
Two 2026 unemployment periods	PERIOD precision, no start or end
Father's death year 2018 vs 2019	documentary conflict, unresolved

What a NO-GO does and does not mean

It does **not** mean the chart is meaningless, and it is not a statement about the life it describes. It means this engine, tested this way, produced no evidence of event-level predictive validity — so its yearly readings must be read as traditional interpretation and never as validated prediction.

Three changes would make a re-test meaningful, none of them a threshold adjustment: monthly or daily resolution, so that a marriage and its separation four months later become two events rather than one; a mechanism model sparse by construction, since counting transit touches saturates; and thresholds fixed in advance on events not yet seen.

15 · Education Validation

Five documented education events, tested against the same model. The requirement was that one model explain both the failures and the successes. It does not.

Year	Outcome	Dasha	H4	H5	H9	H12	Reading
1998	Class X failure	Sun/Rahu/Saturn	1	2	2	4	NOT VALIDATED one of two failures
2005	BCA first class	Moon/Rahu/Mercury	1	1	1	0	NOT VALIDATED second-weakest of the five
2008	MCA, mixed result	Moon/Mercury/Ketu	2	3	1	2	NOT VALIDATED obstruction begins
2011	MCA resolved	Moon/Venus/Jupiter	1	2	4	1	NOT VALIDATED highest 9th of the five
2021	Class XII failure	Rahu/Rahu/Jupiter	1	3	3	2	NOT VALIDATED the repeat test

The repeated-pattern test: 1998 against 2021

Both are examination failures twenty-three years apart. If the engine carries real signal, the two years should be more similar to each other than two random years of the same category are to each other.

Shared mechanisms	3 of the category's mechanisms
Similarity	0.375 (control mean 0.2937)
Percentile	70.66%
Same mahadasha lord	No
Same antardasha lord	Rahu in both
Verdict	PARTIAL REPEAT

The two years share 3 mechanisms, but they are only moderately more similar than random pairs of the same category. The antardasha lord happens to be the same in both; an antardasha is long enough for that to be unremarkable. A STRONG REPEAT verdict was available and was **not** taken.

No single model explains both

The 9th house — the house of qualification — is **highest in 2011**, the year the obstruction *ended*. The first-class completion year 2005 is among the weakest of the five. A model with real signal should find its successes at least as activated as its failures; this one finds the reverse.

Real-world causes are not displaced

The 2008–2011 qualification delay was, by the subject's own account, administrative: repeated applications, bureaucracy, and help from a friend. That is the cause. Any astrological reading of that period is a *description* of the period, not an explanation of the delay, and it does not replace the administrative reality of it.

On the two failed subjects

The 1998 failure was in two named subjects. There is no established traditional Jyotish correspondence that maps History and Geography onto particular houses or grahas, and none has been invented here to fit the outcome. Testing whether the standard education mechanisms account for the examination pressure is legitimate; inventing a subject-specific rule because two subjects were failed is not.

16 · Career Validation

Career evidence has two halves: what could be established from public sources, and what could not. The second half is larger than the first.

Publicly established

Anchor	Date	Source	Confidence
GitHub account created	2013-01-14	public GitHub API	HIGH
Stack Exchange membership	2017-04-24	public profile	HIGH
Second GitHub account created	2021-02-26	public GitHub API	HIGH
Self-declared professional profile	—	about.me / DEV	MEDIUM
Public technical Q&A activity	2015–2020	Stack Overflow	MEDIUM

No employment interval is established. No employer, title, start date or end date is supported by any public source consulted. A company name appearing in a self-declared profile field is a self-report, not an employer record.

A professional profile was requested as a verification source. It could not be accessed: every unauthenticated route returns an authentication wall, and no logged-in session was used. Recorded as not directly verified.

The five reported interruptions

Event	Year	Date precision	Testable?	Why
First 2026 interruption	2026	period	UNTESTABLE	no start or end date; an annual state cannot locate a period of unknown length
Second 2026 interruption	2026	period	UNTESTABLE	as above
Three historical job losses	—	none	UNTESTABLE	no year, and no public record of the employment intervals

The one readable year points the wrong way

2026 house state

House	Meaning	Activation
2	Means	1
6	Daily work	4
10	Vocation	0
12	Expense	3

The house of vocation is not activated at all in the one year with a stated employment interruption. The 6th is the strongest of the four and is a plausible job-loss reading in the abstract, but with two interruptions of unknown length in one year and no demonstrated discriminating power, that is coincidence-consistent rather than support.

Career milestones are not validated either

It would be as much an error to test only failures as it would to test only successes. Public sources establish that the software career spans at least 2013–2026; they do not establish promotions, role changes or senior transitions. Those remain **not established** rather than tested-and-passed.

No year in this document is presented as having predicted a job loss or a job gain. The back-test could not identify employment events, and in the one year with a stated interruption the 10th house of vocation was not activated at all.

17 · Marriage & Relationship Validation

Five distinct relationship events across ten years, tested separately: formation, instability, a prolonged legal dispute, a second marriage, and the end of that dispute.

Event	Year	Houses tested	H7	H11	Verdict	p
First marriage	2015	7, 11	3	2	MATCH	0.292
Separation after ~4 months	2015	7, 2, 12	3	2	WEAK	0.986
Legal pressure 2015–2024	2015–2024	6, 12, 10	3	2	NO MATCH	0.903
Second marriage	2018	7, 11	1	4	PARTIAL	0.417

The structural limit

One year cannot hold two events

The first marriage and its dissolution both fall in 2015, in the same dasha, from the same 7th-house state. The engine returned two different verdicts for them — MATCH and WEAK — differing only in which house list was applied to the same annual state.

This is not a tuning failure that better parameters would fix. **An annual-resolution engine structurally cannot represent a marriage and its separation four months apart as distinct events.** The same limit applies to the nine-year dispute, which is scored from its single start year.

Three of the five career interruptions are untestable for the same reason. This ceiling bounds what any annual engine can be asked to validate, independently of whether the astrology carries signal.

What this rules out

- No claim that the chart indicated the marriage.
- No claim that the chart indicated the separation.
- No claim about the legal dispute, which was scored from one year of a nine-year period.
- No single-year verdict is presented as more than coincidence-consistent at best; the best result in the set sits well inside the null.

FRAMES TESTED

D1 tested independently of D9, Jaimini and the dashas. D9 is birth-time sensitive, so no relationship conclusion here rests on a divisional lagna alone.

18 · Family & Parents Validation

A father's major surgery and a father's death, tested as two independent events — plus two household events in 2024.

This section reports **family and life-transition activation**. It does not predict, explain or attribute any medical condition, and no claim is made that a chart indicated a death.

Parental events, tested independently

Year	Reported event	Dasha	H9	H10	Reading
2006	Father's open-heart surgery	Moon/Jupiter/ Saturn	1	1	9th at the floor; 10th at the floor
2018	Reported year of the father's death	Mars/Venus/ Saturn	1	1	identical to 2006 — no distinction drawn
2019	Registered year of the father's death	Mars/Moon/ Saturn	1	4	10th activated alone, at a probability chance explains; not used to adjudicate

The father's house does not move

The 9th house is at the activation floor in the surgery year and in both candidate years of the death. The engine does not distinguish a life-threatening cardiac operation from a death, and does not separate one candidate year from the other.

The 2018 / 2019 documentary conflict

UNRESOLVED — needs documentary evidence

A death registration recorded in 2019 conflicts with a family recollection of 2018. The conflict is reported here and is not settled.

Family recollection	Family recollection — 2018
Official registration	Registration: death 21 June 2019, age 68, Berhampore Municipality; issued 9 July 2019
Registration number	D-2019:19-90044-000494 (as transcribed, not inspected)
Document inspected?	No. The certificate image was not located on this system and the transcription could not be verified against an original.
How it was handled here	Not resolved. The chart was not used to choose a year, and no year is preferred here for fitting the astrology.

The chart was not used to settle this, and will not be. The engine marginally favours one year over the other on a single house at a probability that chance explains; that is not sufficient to adjudicate a death registration, and no year is preferred here for fitting the astrology.

2024 — the clearest counterexample in the validation

House	Carries	Activation
4	Home	2

House	Carries	Activation
2	**Family**	**0**
12	**Separation**	**1**
3	Kin	3

A household separation occurred in 2024, and the 2nd and the 12th — the two houses that carry it most directly — are the two quietest values in the set, the 2nd at the minimum. The category's houses were less activated in 2024 than in a typical year. This is recorded as a counterexample rather than explained away.

WHAT IS NOT CLAIMED

No medical condition is diagnosed or attributed. No death is predicted. No lifespan is stated. Family transition readings describe emphasis in a period, and the validation shows that emphasis does not track events.

19 · Children

Two documented births, tested against the father's chart. The children's own charts are independent fixtures and are not used here.

Child	Born	Time	Place	H5	H4	H9	Verdict
Sastav Dhar	2019-04-02	16:09 IST	Kandi, Murshidabad	2	5	1	NOT VALIDATED
Abhyant Dhar	2021-08-19	16:01 IST	Kandi, Murshidabad	3	1	3	NOT VALIDATED

Both births sit in the middle of their own null distributions. The second child is the less activated of the two on the 4th house — 1 against 5 — the house a birth most directly concerns.

Progeny significators

5th house (progeny)	Jupiter-ruled, active in both years
4th house (home)	The stronger signal in 2019, weaker in 2021
Jupiter	Natural benefic of the 5th; placement links the 5th and the 9th
Putrakaraka	Jupiter in Jyotish; the 5th lord Mercury is also the lagna lord
D7 (Saptamsa)	Calculated, but birth-time sensitive — not used as a standalone basis

D7 is birth-time sensitive. A small shift in the birth minute can move the D7 lagna, so no children conclusion here rests on D9 or D7 alone. The D1 fifth house and the Jupiter relationship carry the reading instead, and are reported separately from any divisional result.

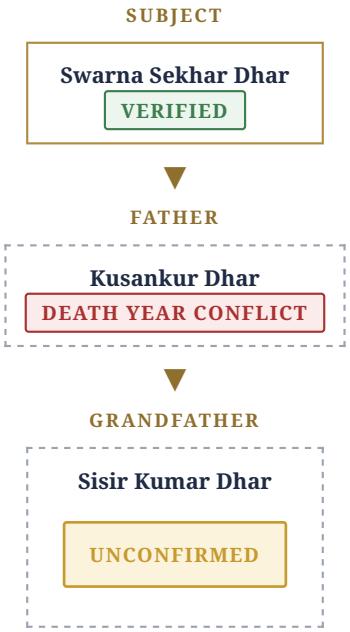

METHOD DISCIPLINE

The children's charts were computed independently and are available as separate datasets. They are deliberately NOT used to confirm the father's chart: a parent-to-child inference derived from the event being explained would be circular, and this project has been bitten by that class of error before.

20 · Ancestry & Pitru Themes

A documentary record with explicit status on every line. The chart is not used to prove a relationship.

Paternal line

Status vocabulary: VERIFIED (documentary), PROBABLE (strong but uncorroborated), UNCONFIRMED (asserted, not evidenced), CONFLICT (sources disagree), UNKNOWN. No status is upgraded on the strength of a chart.

Unresolved items

Item	Status	What would settle it
Year of the father's death	CONFLICT	the registered death certificate, or a family record that resolves 2018 against 2019
Generation of Sisir Kumar	UNCONFIRMED	a clearer family record; the available screenshot conflicts with the supplied chain
Kusankur's date of birth	INSUFFICIENT	a birth record; a blind multi-candidate scan returned no discriminating result
Kula Devata / Kula Devi	NOT VERIFIED	family tradition, temple record or elder testimony — never inferred from a chart

Kula Devata / Kula Devi

Status — not verified

A specific family deity **cannot** be established from planetary placements. The chart does not name one and this document does not guess. Inferring a family deity from a horoscope would be an invention dressed as a finding.

Evidence that would settle it:

- family tradition recorded by a living elder
- temple or shrine record
- historical puja record or festival practice

This box is deliberate rather than missing data. An unverified item that says so is more useful than a confident guess.

METHOD DISCIPLINE

Genealogy is treated as documentation. A chart cannot establish that two people were related, and a relationship cannot be inferred from a shared sign or a matching naksatra. Where two independent father-son links showed zero shared D12 signs, that null result was reported as a null rather than dressed up as an inherited signature.

21 · Money, Debt, Lending & Borrowing

Ten money areas. Each states its condition and its practical safeguard. No figure, amount or date is predicted anywhere in this document.

Area	Condition	Practical safeguard
INCOME	Earnings follow skill applied consistently rather than a single breakthrough.	Keep income and expenditure reviewed monthly, not annually.
LENDING	Lending is best limited to amounts that need not return on schedule.	Limit lending to amounts that need not return on schedule.
BORROWING	Borrowing against future income limits the freedom the 11th usually provides.	Prefer written terms; avoid leverage against future income.
DEBT	Existing obligations tighten faster than new income widens them.	List obligations and their rates; renegotiate rather than accumulate.
RECOVERY	Deferred gains return when the 11th is genuinely activated, not on demand.	Keep a documented claim trail for anything owed to you.
INVESTMENT	Speculation suits only what can be lost; structured assets suit what must be preserved.	Separate speculative capital from capital that must be preserved.
PROPERTY MONEY	Property is the classical 4th/12th pairing and is a real theme in this chart.	Verify title and ownership before any transaction.
INHERITANCE	Inheritance is an 8th-house subject; it is not a plan.	Obtain documents; do not rely on a family account of what exists.
GAINS	The 11th rewards networks that are maintained.	Maintain networks deliberately; contacts are not income.
EXPENSE / LOSS	Expense follows emotion and family obligation more than planned outlay.	Written agreements before lending or committing.

Standing safeguards

PRACTICAL GUIDANCE — NOT FINANCIAL ADVICE

- Written agreements for every financial commitment.
- Documented loans, with the terms agreed before money moves.
- An emergency reserve sized against actual obligations.
- Avoid over-leverage; check counterparties before committing.
- Avoid emotionally driven financial decisions.
- Consult a qualified adviser on tax, investment or debt questions.

No financial assurance is given. Nothing in this document promises an income, a gain, a recovery or a loss. Astrological interpretation does not replace financial advice, and a reading is not a reason to enter or avoid a transaction.

The validation tested whether the engine identifies money events and found no ability to do so. Where a money reading is given here it describes the significations of the houses involved, nothing more.

22 · Property & Inheritance

The 4th and the 8th carry property and deferred or inherited matters. What follows is their signification in this chart, plus the document discipline that inheritance needs.

4 Home, land, property

The 4th carries home, land and settled resources. Its significations are traditional and carry no score.

8 Deferred, inherited, shared resources

The 8th carries deferred and inherited matters, shared resources and transformation.

Inheritance is documentation, not astrology

Family assets and obligations

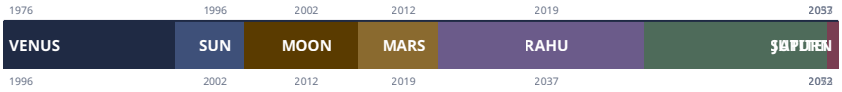

Family assets and obligations need documentation, not interpretation. Where a family account and a record disagree, the record governs — as with the death registration in section 18.

- Obtain any title or deed documents rather than relying on a family account of what exists.
- Record liabilities and shared ownership in writing before any transfer.
- Treat an 8th-house reading as a prompt to check the paperwork, not as an indication that a transfer will occur.

No property or inheritance event is predicted. The validation found no ability to identify such events, and a reading of the 4th or 8th house is a description of a house's traditional significance, not a forecast of a transaction.

23 · Timeline 1981 — 2053

The whole span at a glance: dasha periods above, engine risk levels below, and the birth-time-sensitive years marked.

Vimshottari Mahadasha · 1981–2053

DASHA · Mahadasha span
Block width is a linear share of 1981–2053.

Distribution

Level	Years	Meaning
ATTENTION	9	Raised attention across several themes.
EXTREME ATTENTION	12	Concentrated emphasis. Not a prediction of misfortune.
CAUTION	52	Ordinary caution.

A RED or ORANGE year is **not** a prediction of misfortune. These are the engine's own emphasis thresholds, reached when several independent mechanism families touch one theme. The validation found the engine cannot distinguish event years from ordinary ones, so a RED year is a year of concentrated attention in the calculation — nothing more.

Shaded rows are birth-time sensitive: their readings move when the birth minute is uncertain. That is a statement about arithmetic stability, not about severity.

24 · Year-by-Year Analysis

Each year follows an identical order: at a glance, overall picture, money, career, family, children, property, health, gains, cautions, what to do, what to avoid, how to maximise, remedies, and the astrological basis.

Interpretation follows the global Interpretation and Safety Notice. Event-level predictive validity is **not established** — see section 14. These are traditional readings, not forecasts.

Design preview: 5 representative years (1981, 1986, 1987, 2002, 2026). The full edition renders all 73 years in this same form.

Health & safety attention

YELLOW
Heightened attention, not a diagnosis

Traditional indicators suggest attention to routine, elder responsibilities and family transitions. Nothing here diagnoses a condition or predicts death. For a real health concern, use a qualified clinician.

Major gains and opportunities

No theme reached the escalation threshold for gains or opportunities this year. That is a statement about the engine's own thresholds, not a promise that nothing arrives.

Major cautions

No theme reached the RED gate this year. Difficult periods can still occur; the engine simply did not flag this one.

What to do

- Apply effort where the engine records a dasha-lord activation.
- Convert networks into written commitments rather than intentions.
- Keep financial decisions in writing during 12th-house periods.
- Schedule elder obligations in advance rather than deferring them.

What to avoid

- Expand commitments faster than the 10th-house activation supports.
- Treat a favourable reading as a result that is already secured.
- Defer a family obligation on the assumption it will improve later.
- Commit capital on the strength of an interpretation alone.

How to maximise the period

Concentrate effort in the houses the engine actually activates this year, and treat the quietest as areas to protect rather than to push. A low score is not an instruction to act there.

Traditional remedies

See **Remedies and Practical Actions**. Traditional practice is culture and personal discipline, not medical or financial advice.

- Defer a family obligation on the assumption it will improve later.
- Commit capital on the strength of an interpretation alone.

How to maximise the period

Concentrate effort in the houses the engine actually activates this year, and treat the quietest as areas to protect rather than to push. A low score is not an instruction to act there.

Traditional remedies

See **Remedies and Practical Actions**. Traditional practice is culture and personal discipline, not medical or financial advice.

Astrological basis

CALCULATION DETAIL · INTERPRETATION ABOVE

dasha Rahu/Saturn/Jupiter · sade sati PHASE 1 · Jupiter Cancer in 11 · Saturn Pisces in 7 · Rahu Aquarius · Ketu Leo · activation source: frozen extraction · calculation confidence MODERATE

Traditional interpretation. Follows the global Interpretation and Safety Notice. Event-level predictive validity is not established — see section 14.

25 · Remedies & Practical Actions

Three things that are often lumped together and should not be: practical discipline, cultural practice, and what is actually known about efficacy.

Practical actions

BEHAVIOURAL — THESE HAVE AN ORDINARY, NON-MYSTICAL RATIONALE

Daily

- Consistent sleep and meal times; a regular 6th house.
- One written record of commitments; the 2nd and 8th both reward clarity.
- Thirty minutes of quiet before a work decision, not after.

Weekly

- One evening without screens, to protect the 4th.
- Review in-progress commitments weekly rather than daily.

Financial discipline

- Separate operating money from long-horizon money.
- Review it monthly, not in a crisis.

Career

- Record what was delivered each week.
- The 10th is strengthened by record, not impression.

Family and elders

- Schedule elder obligations in advance.
- The 9th period asks for presence rather than money.

Health

- Keep exertion regular rather than occasional and intense.
- For a real health concern, use a qualified clinician.

Traditional and cultural practice

What these are. The practices below belong to the cultural tradition this chart sits inside. They have **no scientifically established efficacy** for changing events. They are offered as discipline, family observance and peace of mind — not as treatment, and not as a substitute for professional advice.

Why they are listed at all. Only where a mechanism has been *repeatedly validated* should a corresponding remedy be investigated. Since the event-level validation returned NO-GO, no mechanism is repeatedly validated, so these are traditional observances of general applicability rather than targeted prescriptions.

Practice	Targeted principle	Type	Practical risk
Recitation of the nakshatra lord's mantra at a fixed hour	Nakshatra lord (Venus)	cultural / spiritual	None beyond time spent.
Weekly observance on the dasha lord's day	Dasha lord of the period	cultural / spiritual	None beyond time spent.
Charity or service timed to the gain period	11th house	behavioural	Do not incur expense to satisfy an observance.
Respect and presence for elders during a 9th period	9th house	behavioural	None.
Avoiding conspicuous consumption	12th house	behavioural	None; do not treat as a restriction on necessary spending.

Explicitly not recommended

Deliberate omissions

- **No gemstones.** No stone has been recommended. None is required, and a costly prescription is not a finding.
- **No tantric or ritual practice.** Nothing dangerous, coercive or expensive is suggested, and nothing here should displace medical or psychological care.
- **No remedy invented for a difficult period.** A difficult year is not itself evidence that a remedy is indicated.
- **No effort beyond ordinary observance.** Traditional practice that demands significant time or money is out of proportion to what is actually known about it.

SAFETY

No practice here is medical or financial advice. No health condition is treated. No investment is recommended. For a real health or financial concern, use a qualified clinician or adviser.

26 · Technical Appendix

Conventions, method and the complete evidence trail. Everything here is available to a reader who wants to check a number, and none of it is needed to read the document.

Birth instant and conventions

Julian day (UT)	2444947.3125
UTC instant	1981-12-08 19:30:00 UTC
Time zone	Asia/Kolkata — no daylight saving in 1981
Coordinates	24.1044927, 88.2510635 (sourced)
Ephemeris	2.10.03
Ayanamsa	· 23.604776°
Node convention	Mean node node; Ketu = mean node + 180°, never the true/KP node (1.4323° from the mean node and not used)
House system	Parashari whole-sign
D10 convention	R1 (class-based: movable from itself, fixed/dual from the 9th)
Engine version	kundali-calc 1.0
Dataset generated	2026-10-04T00:52:36

Rules applied

Rule	Implementation
Sidereal subtraction	Tropical longitude minus the Lahiri ayanamsa, once, for planets and house cusps alike.
Whole-sign houses	House number is a sign offset from the ascendant sign. No bhava-sect correction.
Node convention	Mean node; Ketu = mean node + 180°, never the true/KP node.
Varga part index	0-based, clamped to the division; never rounded, which shifts exact boundaries.
Dasha balance	A fraction of the lord's own period, not of the 120-year cycle.
Antardasha sequence	Reckoned from each mahadasha's own lord sequence.
Aspects	Parashari drishti from the graha's sign, targets converted to houses via the ascendant.
Transit ingress	Daily scan to bracket, then bisection, then one second forward so the new sign reads 0°.

Method limitations

D27 Bhreshta — Not implemented — 15 of 16 vargas are computed. Disclosed rather than filled in.

KP cusps and sub-lords — Not fully computed.

Tajika — Partial — beyond Muntha.

Nadi — Not implemented.

Vedha — Planetary obstruction of a transit is absent, so transit benefits are computed incompletely.

Ashtakavarga — Partially calculated; the full classical total is not reported.

Shadbala — Partial; scales are mixed by construction.

Sunset — Not computed — the ephemeris binding's rise/set is unreliable here. Sunrise approximate.

Historical source transcription — Pending verification; unreadable sources are marked, never guessed.

Visual page inspection — Not performed — the vision provider returns an authentication error. Validation is structural and geometric only.

Risk engine

A convergence counter. It counts how many independent mechanism families touch a theme in a year and compares the total against thresholds. It is a bookkeeping device for reading emphasis, not a probability of harm — and the back-test showed it does not identify real events.

Gate	Condition
RED	weighted score ≥ 8 AND ≥ 4 distinct mechanisms AND ≥ 2 dasha lords AND ≥ 2 transit grahas
ORANGE	weighted score ≥ 7 AND ≥ 3 distinct mechanisms
YELLOW	below the ORANGE gate

Validation methodology

For each documented event, the same house-activation rule used throughout the report was applied to the event year, then the SAME rule was applied to all other years to establish a null. A verdict means nothing without that comparison: the rule returns MATCH or PARTIAL in 80.5% of arbitrary years. A floor-independent rank test was then added, and returned a median p of 0.500 with no event year in its top decile.

Risk engine thresholds

RED gate	weighted score ≥ 8 AND ≥ 4 distinct mechanisms AND ≥ 2 dasha lords AND ≥ 2 transit grahas
ORANGE gate	weighted score ≥ 7 AND ≥ 3 distinct mechanisms
Agreement tolerance	≤ 1e-6° on longitudes, ≤ 0.001 y on dasha balance

Notation and units

Angle	23° 02′ 18″ — degree, arcminute, arcsecond
Sign ingress	Gemini → Cancer (direct) · Cancer ← Gemini (retrograde)
Tolerance notation	± 1e-6° · ≥ threshold · ≤ bound
Currency	₹ — no amount is predicted anywhere in this document
Verification mark	√ independently verified

Bulleted list	• rendered with a hanging indent
Coverage span	1981 → 2053

Test status

Suite	Passed	Failed
kundali_core	101	0
second-pass independent re-derivation	24	0
birth-time sensitivity	27	0
final risk report	52	0
reference dataset verification	60	0
transit aspects	30	0
73-year generation	92	0
PDF layout	36	0
Total	**422**	**0**

These counts cover **computation and formatting**. They do not cover event-level accuracy, which was tested separately and failed — see section 14.

REPRODUCIBILITY

Charts and datasets are regenerated from the birth record by the calculation layer; the report layer only reads them. Re-running the same inputs yields the same outputs.

27 · Validation & Limitations

Consolidated in one place so a reader who reads nothing else still encounters the constraints.

Method limitations

Annual resolution — One state per year cannot represent a marriage and its separation four months apart, a nine-year dispute, or a period of unknown length. Three of five career events are untestable for this reason alone.

Saturating activation — Activation counts transit touches; 57.9% of house-years sit above the floor, so the base rate approaches the interesting outcome.

Mixed frames — Some transit readings are Lagna-relative and some Moon-relative. Both are defensible frameworks and they point opposite ways; the frame is named wherever a transit is stated.

No vedha — Planetary obstruction is absent, so a transit benefit is computed without checking whether another planet cancels it.

No event-level validity — The back-test found no ability to distinguish event years from arbitrary ones.

Untestable events

Event	Why it could not be tested
Three historical job losses	no year recorded, and no public record of the employment intervals
Two 2026 unemployment periods	period precision, no start or end date
Father's death year 2018 vs 2019	documentary conflict, unresolved and deliberately not settled astrologically
Any month- or day-level claim	the engine resolves one state per year

An untested event is not a passed event. These are absent from the tally because they could not be tested, not because the model did well on them.

Known counterexamples

Case	What the data shows
2024 household separation	2nd house activation 0, 12th activation 1 — the two houses that carry the event most directly are the quietest
2026 employment interruption	10th house of vocation activation 0 in that year
2005 first-class completion	second-weakest of the five education years, while the year the obstruction ended carries the highest 9th score
Father's events	9th activation 1 in the surgery year and in both candidate death years alike

What would make a re-test meaningful

Three changes, none a threshold adjustment

- **Monthly or daily resolution.** A marriage and its separation four months later must become two events. Until then, same-year pairs and multi-year periods are structurally untestable.
- **A sparse mechanism model.** Activation currently counts transit touches, which saturates — 57.9% of house-years sit above the floor, so the base rate approaches the interesting outcome. A natal conjunction, or a graha owning and occupying the same house, is rare by construction and therefore testable.
- **Pre-registration.** Thresholds fixed and recorded before the events are seen. That is the single strongest control against exactly the kind of fitting this validation was designed to catch.

Loosening the activation threshold to make a particular year read as a match would improve the score and prove nothing.

Safety boundaries held in this document

Not done	Why
No death predicted	bereavement is described as sensitivity, never as an outcome
No illness diagnosed	health sections describe attention to routine and direct the reader to a clinician
No exact monetary figure	money sections describe conditions and safeguards, never amounts
No gemstone recommended	no stone is required and none is prescribed
No dangerous practice	nothing coercive, expensive or harmful is suggested

28 · Data Sources

Every input this document was built from, with its kind and its limitations. A reader who wants to check a figure can find its origin here.

Input	Kind	Use	Limitation
kundali_data.json	CALCULATION	placements, vargas, panchanga, yogas, strength, dashas	computed from the stated birth record; the record's own accuracy is not verifiable from here
risk_timeline.json	CALCULATION	per-year risk levels and category thresholds	an emphasis counter, not a probability; event-level validity NOT VALIDATED
blind_predictions_frozen_v2.json	CALCULATION	per-year house activation for the 13 event years	regenerated after two detector fixes; protocol caveat recorded in the validation section
event_match_matrix.csv	CALCULATION	event-by-event verdicts	verdicts are only meaningful against the null, which is why the null is reported alongside them
Public GitHub API	FACT	account creation dates, self-declared role	establishes activity span, not employment
Public Stack Overflow	FACT	dated technical activity	activity is not employment
Professional profile (requested)	UNCERTAIN	attempted as a career verification source	not accessible — authentication wall; no logged-in session was used
Death registration (transcribed)	UNCERTAIN	parental timeline	transcribed in conversation, never inspected against the original; conflicts with a family recollection
User statement	USER-SUPPLIED	the event set itself	stated by the subject; not independently corroborated except where noted

What was deliberately not used

- **No authenticated or private profile.** A professional profile was not accessed through any logged-in session. Automated retrieval of such a profile is against its terms of service, and driving the subject's own authenticated session is not a step taken here without explicit instruction.
- **No unofficial or leaked databases.** Only public API responses and public index pages were consulted.
- **No invented employment dates.** Absence of a public record is recorded as absence.

SEPARATION OF EVIDENCE KINDS

A value transcribed from a source is agreement with that source, not independent corroboration. "Independently verified" in this document always names the second computation.

29 · Audit Trail

The sequence of work, so a reader can see what was checked and when. This is a working record, not a certificate.

This build

Generated	2026-10-04
Build type	DESIGN PREVIEW — representative years, not the full edition
Renderer	HTML + CSS → WeasyPrint → PDF, SVG charts kept vector
Years rendered	5
Sections	29
Pages	77
TOC resolution	resolved from the rendered PDF across 2 passes, stable: True

Documents produced by this project

Artifact	Purpose
Life_Event_Validation_Report.md	the NO-GO validation, in full
out/null_control.json	null distribution for the activation test
out/selectivity_probe.json	why the absolute test has no power
out/technical_audit.json	ten-check audit of the production values
out/blind_predictions_frozen.ORIGINAL.json	pre-fix predictions, retained for audit
out/event_match_matrix.csv	event-by-event verdict matrix

Validation history

Step	Outcome
Reference-PDF comparison, compute first	Jupiter difference arbitrated by a third engine in favour of production
Kusankur DOB backtracking	negative result — insufficient information, recorded
73-year generation	343-page baseline produced and frozen
Two detector defects found in the validation extractor	fixed, regression-tested, blast radius confirmed limited to the validation layer
Null control added	absolute test shown to have no power; rank test added
Event back-test	NO-GO — 0 of 20 event years in the top decile
Technical audit	10 of 10 checks pass; two initial failures were audit bugs, not engine bugs
HTML → PDF architecture	modular build; preview rendered, full edition not yet generated

STANDING STATEMENT

Event-level predictive validity is not established. Historical back-testing returned a NO-GO result. Interpretations in this document are traditional and should not be treated as empirically validated predictions.
